(54) PHASE DIFFERENCE PLATE

(57) Abstract:

PURPOSE: To eliminate chromatic unevenness and enlarge the degree of freedom in processing, by embodying ring-form olephin polymeride as a film or sheet ductilely stretched uniaxially, and giving it a specific retardation value and dispersion.

CONSTITUTION: Ring-form olephin polymeride is

embodied as a film or sheet ductilely stretched uniaxially, and its retardation value shall be 135-700nm and dispersion by within 15nm. Forming a phase difference plate from this olephin polymeride is made through such procedures as embodying into film or sheet by the solvent casting method, calender method, etc., and stretching uniaxially according to the purpose.
